

# Valerus Software Licensing Guide

Dear Vicon Customer

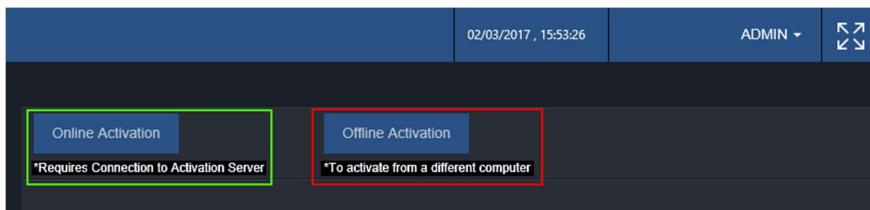

Firstly, thank you for purchasing this Valerus software and/or hardware. This is supplied to you unactivated and needs to be activated once installed or it will run as a Free Demo for 30 Days. This can be done on-line (Internet connection required) or off-line (via another PC with Internet access) as explained below.

Once you have installed Valerus, only the Application server needs to be licensed. In an "All in One" system the Application server is one of the integral parts of the PC that you have. In a larger system the Application server may be a dedicated unit.

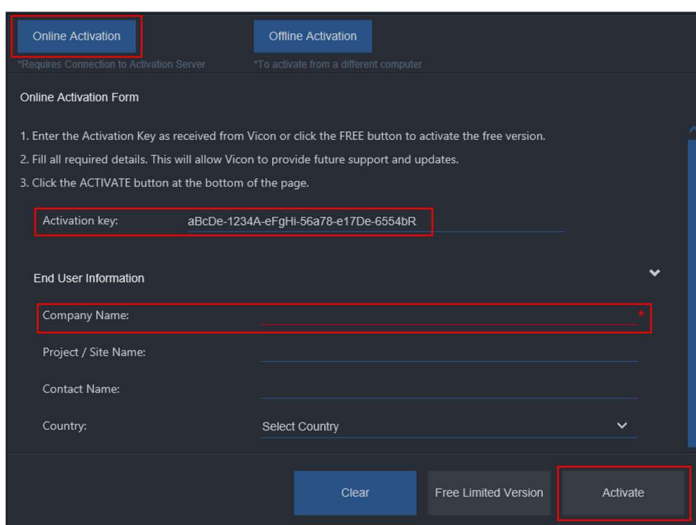

Once you have identified the Application server, login with the default ADMIN username and 1234 password. At the top of the screen click on Configuration and the options shown will appear.

Click on System then Licensing

You now have a choice of online or offline activation. To activate online the PC that Valerus is installed on **MUST** be connected to the Internet even if this is just a temporary measure. If you do not have an Internet connection please skip to the offline method.

## Online Activation

Click on the Online Activation button and the form shown will appear. Enter the unique Activation key supplied by Vicon. This will be similar to the one shown. (\*You do not need this key for the free limited version. See notes as the end.)

Complete the form as fully as possible. You **MUST** fill in any boxes highlighted in **Red** to proceed.

Once finished click on Activate and you will be connected to our Activation server that will complete the process.

Registered in England No 1551194  
VAT Registered No GB 339 1987 16

## Offline Activation

Online Activation    Offline Activation

\*Requires Connection to Activation Server    \*To activate from a different computer

**Offline Activation Form**  
If you already obtained a license file from the vicon website click the upload button. Otherwise follow the procedure below:

Upload License File

Generate a file for offline activation:

1. Enter the Activation Key as received from Vicon or click the FREE button to activate the free version.
2. Fill all required details. This will allow Vicon to provide future support and updates.
3. Click the SAVE button at the bottom of the page to save to a file. You can then use the file to activate your license.

Activation key: aBcDe-1234A-eFgHi-56a78-e17De-6554bR

End User Information

Country: Select Country

Clear    Generate Free Limited Version    Generate Request File

Click on the Offline Activation button and the form shown will appear. Enter the unique Activation key supplied by Vicon. This will be similar to the one shown.

Complete the form as fully as possible. You **MUST** fill in any boxes highlighted in Red to proceed.

Once finished click on the Generate Request File button and you will be prompted to download a file named ActivationRequest.dat. Save the file to a memory stick as you will need to take this to another PC that has Internet access to continue the activation process.

## Activate Valerus VMS Offline

Welcome to the offline registration portal. Here you can upload a hardware key you generated from an offline Vicon VMS and receive a license key you can use to activate that system.

**Important!** If you do not have a system hardware key yet, make sure to obtain one first. You will need the license details provided from Vicon and to follow the 'offline activation' process in the VMS configuration – System – licensing.

**Step 1** – upload hardware key

Click the button to browse your computer and select the hardware key for your system

Choose File No file chosen

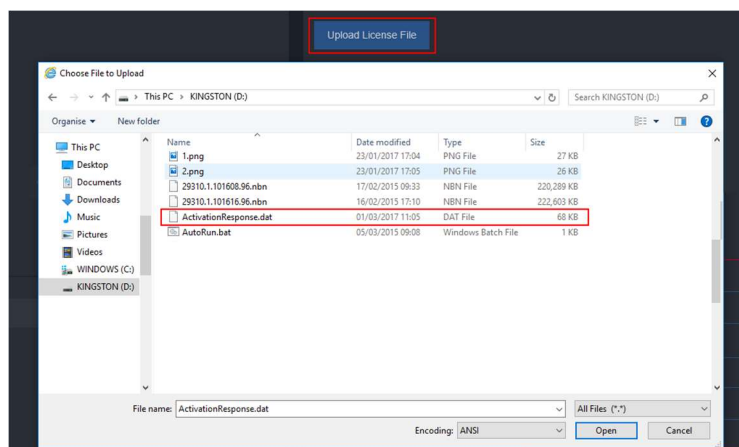

Upload

You will now need to take your memory stick and plug it into a PC that has Internet access.

Using your web browser navigate to this address:  
<https://www.vicon-security.com/learn-and-support/software-registration>  
(subject to change - please check main website)

Click on Choose File and navigate to your Memory stick and the ActivationRequest.dat file. Click on Upload.

You will then be asked to confirm your details before getting the option to download the ActivationResponse.dat file. Download this and save to your memory stick.

You can now return to the Valerus PC/server and plug in your memory stick. On the licensing screen click on the Upload License File button. Navigate to your memory stick and open the file ActivationResponse.dat. This will cause Valerus to restart and complete the activation process.

Licensing

System Activation Status

Online Activation Supported: ✔

License Type and Status: **Activated**

Activation key: aBcDe-1234A-eFgHi-56a78-e17De-6554bR

Issue Date: 01/03/2017

Version: 1.1

Hardware ID: BB302904

License Tier: Pro
